

Technical advice on the conversion process: **Storage and Stacking**

Papelera Del Sur guarantees the useful life of its paperboard for a period of two years after its manufacture, under the following conditions:

- The product must be stored in its original wrapping to keep manufacturing properties. Do not expose the product to sunlight, conditions of moisture and significant temperature variations.
- It is advisable to stack reels with their axes vertically, with a maximum height of 8 metres, in order to avoid product deformation
- When sheets are purchased, a maximum of two stacks is convenient, in order to ensure greater stability.
